CHIEF COMPLAINT:

Patient has been compliant with prescribed medications and physical therapy. Pain is described as sharp and radiating, worse with activity and prolonged sitting. Range of motion remains limited. Patient reports continued pain in the cervical and lumbar regions. Neurological examination is within normal limits. Will continue current treatment plan and re-evaluate in four weeks.

HISTORY OF PRESENT ILLNESS:

Pain is described as sharp and radiating, worse with activity and prolonged sitting. Range of motion remains limited.

REVIEW OF SYSTEMS:

No new focal deficits noted. Neurological examination is within normal limits. Pain is described as sharp and radiating, worse with activity and prolonged sitting. Work restrictions remain in place.. Patient reports continued pain in the cervical and lumbar regions. Patient is to avoid heavy lifting and repetitive bending.

PHYSICAL EXAMINATION:

Patient reports continued pain in the cervical and lumbar regions. Pain is described as sharp and radiating, worse with activity and prolonged sitting. No new focal deficits noted. Work restrictions remain in place.. Patient is to avoid heavy lifting and repetitive bending. Neurological examination is within normal limits.

ASSESSMENT:

Anxiety disorder (F41.1); Cervical strain (S13.4XXA); Right shoulder pain (M25.511)

PLAN:

Tramadol 50mg PRN. Symptoms have been persistent since the date of injury. Patient is to avoid heavy lifting and repetitive bending. Will continue current treatment plan and re-evaluate in four weeks.
